

D. You should notice that Of the 8 persons tested, the 4 who received Cream A had the highest number of freckles. What is the probability for this to happen if there is no effect of cream on the number of freckles versus the alternative that A results in more freckles?

E. Why did the answer to D differ from your hypothesis Test in C, which approach is better for testing the null hypothesis and why?

2. A famous ski-resort has been built in "Avalanche Valley". This resort is open to skiers on Saturday and Sundays, but is closed to skiers Monday through Friday. Over the past 10 years, the owners have recorded the number of avalanches reported on each day and have seen the following numbers. **NOTE – You can assume that these numbers are based on the same number of days i.e. Exactly 520 Mondays, 520 Tuesdays,, 520 Sundays over the past 10 years**

On Mondays - 10 avalanches

On Tuesdays - 12 avalanches

Wednesday - 15 avalanches

Thursday - 16 avalanches

Friday - 8 avalanches

Saturday - 22 avalanches

Sunday - 21 avalanches

The Environmental Protection Agency is worried that avalanches are more likely to occur on days when people are skiing.
